

# Interviews feedback

Collected from 4 candidates

### Interview no.1

**Project Name:** Positive, easily correlate/associate the name

**Interface:** Very nice, simple. Very abstract. Overall Enjoyed the grey background as visualisations added the colour. He was easily moved through the interface.

**Key Features:** Data Profiling And cleaning ( Null, Duplicates, individual Column changes, Data Size Reduction )

**Personal takeaways:** I like to be told all issues in my dataset and the capabilities to fix them by my composition, as null needs more care, and duplicates are much easier to deal with.

**Personal addition:** allow me to export graphs of issues ( data profiling ) with the dataset to show the business and to graph my clean data.

## Interview no.2

**Project Name:** Positive, easily correlate/associate the name

**Interface:** Too simple and needs to look more professional.

**Key Features:** Data Cleaning ( Null, Duplicates, individual Column changes, Data Size Reduction )

**Personal takeaways:** I like that the application guides me through my problems and fixes them upon my request.

**Personal addition:** allow for Excel import and export, improve UI.

Interview no.3

**Project Name:** Positive, easily correlate/associate the name

**Interface:** Loves the simplicity, likes the contrast between grey background and bright visualisations, “LESS IS MORE”.

**Key Features:** Data Profiling, Data Cleaning ( Null, Duplicates, individual Column changes, Data Size Reduction )

**Personal takeaways:** I like the idea. I want it to be easier to use than other applications such as Orange, and I would like the experience to be more like Excel.

#### Personal addition:

- Think about adding **Statistical information** to each column, I would like to see if each column follows the mean.
  - Think about adding **Dimensionality Reduction**
- Would it be possible to implement **OneHot Encoder** to change categorical variables into dummies?
- Please make it a **No Code experience**, I would like the interface to be similar to excel just drag and drop

Interview no.4

**Project Name:** Positive, easily correlate/associate the name

**Interface:** Likes The design but found the journey from importing to exporting confusing, This user would like a better description of what the finished product looks like before exporting.

**Key Features:** Data Profiling, Data Cleaning ( Null, Duplicates, individual Column changes, Data Size Reduction )

**Personal takeaways:** The idea is great, but I feel you need a more modern look and feel.

**Personal addition:**

- I would love it if the application could take Excel files
- I would love to work with text mining, maybe any text functionalities which could help me such as Remove special characters
- Help me change my column names, e.g Lowercase, Uppercase
